

WWW.RUSHRACINGPRODUCTS.COM

Thank you for purchasing **RUSH**. We strive for excellence and take pride in making the best exhaust possible for your Harley-Davidson®. We take our mufflers to an all new level in the exhaust industry! With our signature sound, great performance, and a show quality finish to provide great looks for years to come.

MUFFLER INSTALLATION

PLEASE READ ALL INSTRUCTIONS BEFORE BEGINNING

Note: Installation instructions are to replace STOCK exhaust. If aftermarket exhaust is already installed you may need to obtain stock mounting hardware from your dealer.

1. Be sure hands are clean and free from grease and oils before beginning.
2. Remove stock slip on mufflers from stock head pipes. **(If you are having difficulty removing stock exhaust please refer to your manual for proper instructions.)**
3. Determine RH and LH mufflers. Touring Series mufflers are the same right and left. **Big Louie mufflers are side specific, and have an indentation that goes to the inside or wheel side when installed.**
4. Loosely position (1) stock muffler clamp onto the RH muffler inlet so that the bolt is to the inside and bottom of muffler. Slide the muffler onto the head pipe. **Do not tighten. Figure 1**
5. Attach the muffler to the saddlebag support bracket with **(2) BOLT #2** and **(2) WASHER #2**. **Do not tighten. Figure 2**
6. Position the muffler as needed making sure it is seated onto the head pipe as far as possible.
7. Tighten the mounting bolts first then the muffler clamp. ***Note:** Tighten muffler clamp to 60-65 lb-ft.
8. Repeat for the LH side.
9. ***VERY IMPORTANT*** After installation is complete and before starting motorcycle for the first time, be sure to clean the mufflers with a mild degreaser/solvent. This will remove any oils or residues that can cause discoloration. ***Note:** Any leftover residue, oil, or fingerprints, will cause the chrome to discolor.
10. Reinstall saddlebags.

USE BIG LOUIE MUFFLERS
